

The BZS dry toilet system consists of a toilet and a storage bucket. The system is based on stackable plastic buckets with tightly sealing lids, from which the toilet and the disposal unit can be assembled. This system, requiring neither water nor chemicals, is therefore extremely simple and represents an ideal solution for any kind of emergency. A disposable bag is placed over the insert bowl, sealed after use, and then deposited in the storage bucket, which is lined with a collection bag.

#### Also suitable for WC units:

In the event of a breakdown in the water supply to toilets, these sets can be supplied without a mounting ring and without a seat with lid.
